- NO MEMCOMPRESS
  In-Memory data is populated without compression.
- MEMCOMPRESS FOR DML
  Level mainly intended for increasing DML performance and minimal compression.
- MEMCOMPRESS FOR QUERY LOW – the default
  Optimized for query performance (default).
- MEMCOMPRESS FOR QUERY HIGH
  Optimized for query performance and space saving.
- MEMCOMPRESS FOR CAPACITY LOW
  Higher space saving level compared to Query High and Low
- MEMCOMPRESS FOR CAPACITY HIGH
  Level optimized for space saving and slightly less capacity.

- **ALTER SYSTEM SET INMEMORY_SIZE=1008M SCOPE=SPFILE**

Index improvements and partitioning techniques is more effective way to optimizing query performance because we used mostly QUERY HIGH and CAPACITY HIGH that means we gain from storage and lost from performance .

Which tables/columns will be stored in columnar store?

- **Products Table => list_price [QUERY HIGH] and model_year [CAPACITY HIGH] columns [Effects 1st, , 2nd ,3rd , 4th queries]**
- **Order_Items Table => discount [CAPACITY HIGH] column [2nd ,3rd ,4th , 6th query]**
- **Staffs Table => salary [QUERY HIGH] column [Effects 2nd ,3rd query]**
- **Stores Table => city [QUERY HIGH] column [Effects 2nd ,4thquery]**
- **Orders Table => order_status [CAPACITY HIGH] column [Effects 2nd ,3rd ,4th,5th query]**

- FIRST QUERY

```
SELECT product_id,brand_name ,product_name, model_year, list_price, category_name FROM
(
    (SELECT * FROM
        (SELECT * FROM
          ( SELECT * from MUTABAY.products prod_outer
             where 1 = (
                 SELECT COUNT(Distinct list_price)
                 FROM MUTABAY.products prod_inner
                 WHERE prod_outer.brand_id = prod_inner.brand_id
                 AND prod_outer.list_price < prod_inner.list_price
                 )
          ) prod
          FULL OUTER JOIN
          MUTABAY.brands brands on brands.brand_id = prod.brand_id
        ) prod_brand
